Profile

Python engineer with 7+ years of commercial experience building backend services and REST APIs, now focused on LLM-powered tools and AI agents (MCP). Experienced with FastAPI, Flask, Django, and AWS. Open to remote roles.

Skills

- Fast learner
- Responsible
- Fluent in Polish, English, German
- Innovation driven
- Open to new experiences
- Creative
- Great with working in teams
- Reliable

Interests

Gaming

Music

Reading

Foreign Languages

Sci-Fi Movies

Cooking

Playing the Guitar

Technical skills

Languages
Python, SQL, TypeScript, JavaScript, HTML/CSS, Java, C#, C/C++

Tools/Platforms
AWS (Lambda, S3, RDS), Docker, Git, MCP, Cursor, PostgreSQL, DynamoDB

Frameworks
Flask, FastAPI, Django, Pydantic AI, SQLAlchemy

Main areas of experience

- Software engineering
- REST APIs
- Dockerization/Containers
- Web services infrastructure
- LLMs
- Prompt engineering
- Test-driven development
- Microservices

Education

MSci Computer Science with an Industrial Year // 2016 - 2021
University of Birmingham, UK
Upper Second-Class Honours (2:1, 3.75 GPA)
Master's Project: Implementing a password manager product that uses voice authentication (Written in Python, Flutter and Google Cloud)

Work experience

Python Engineer // July 2023 - Current
World Food Programme, Rome, Italy (remote work)
- Built an AI agent-based integration of our data aggregation platform using MCP and Pydantic AI, letting staff access beneficiary and operational data through natural-language requests
- Created from scratch Flask-based REST APIs to provide data aggregation across multiple country offices that work with WFP
- Designed and deployed AWS services (Lambda, SNS, S3, DynamoDB, EC2, Athena, Glue, RDS, API Gateway) used in emergency operations across multiple projects worldwide
- Led remediation of external penetration-test findings: added ALTCHA, DynamoDB-backed OTP attempt limiting with lockout, JWT replay prevention, and CSP/CORS hardening
- Took over WFP's Self Registration platform from external contractors and extended it with WSO2 sign-in, multi-tenant routing and multi-language submission handling

Software Developer // November 2022 - July 2023
Flyr, Cracow, Poland (remote work)
- Extracted components from a monolith-based application into various microservices written in Python
- Improved and expanded FastAPI microservices with new functionality
- Worked on implementing PubSub and other Google Cloud services into multiple products
- Took part in designing user-management infrastructure that used Auth0

Software Developer // July 2019 - November 2022
Yobota, London, UK (remote work)
- Expanded a simulation app written in Python used to predict the behaviour of the in-house banking platform using REST APIs
- Improved and expanded Django REST Framework-based microservices with new features and endpoints
- Took part in platform design discussions
